

Company Overview

A pioneer in the development of effective Population Health Management solutions, i2i Population Health has naturally become a leading PHM provider of software, professional services and support—at a revolutionary time in the healthcare industry.

No newcomer to the space, i2i has been helping care providers implement powerful PHM strategies by integrating information from a variety of sources, drawing insights to identify opportunities for care intervention, and ultimately engaging patients early to get them on the path to better health.

“With i2iTracks, this is the first time I’ve had the data I need to make strategic decisions about our operations.”

— Richard Larison, CEO at CBHC —

Driving Success in the Evolution from Fee-for-Service to Value-Based Care

i2i Population Health was founded nearly two decades ago by a group of innovative data technologists who saw a need for PHM support in the federally qualified healthcare segment—the earliest adopters of population management strategies. With the move to value-based care, the entire healthcare industry must transition from a reactive to proactive posture, with support from a trusted advisor.

“Every patient is different, and every practice is different. We need flexibility; we need solutions that address our problems and that’s what i2i did well for us—technology can’t be one size fits all.”

— Ryan Dickert, Director of IT, Meadowcrest Family Physicians —

Removing the Technical Barriers to Effective Population Health Management

With a comprehensive suite of solutions and services, i2i empowers healthcare organizations to achieve better patient outcomes by accessing meaningful, actionable information. With more clients, better results, and industry validation, i2i is the vendor of choice for providers, hospital systems, and payers.
